TIMOTHY P. CALLAHAN
SUPERVISORY PATENT EXAMINER

DETAILED ACTION

Allowable Subject Matter

1. Claims 2-17 and 19-28 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claims 2-8 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 4 wherein each differential transistor pair (402, 412, 432, 442) is configured to receive a different phase (P0, P1, P2, P3) of a clock signal (CLOCK IN) in combination with the rest of the limitations of the base claims and any intervening claims. Claim 9 is allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 4 wherein at least one first differential pair (402) of the plurality of differential transistor pairs is responsive to a first clock phase (P0) and at least one second differential transistor pair (412) of the plurality of differential transistor pairs is responsive to a second clock phase (P2) in combination with the rest of the limitations of the base claims and any intervening claims. Claims 10-13 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 4 wherein the interpolator circuit further comprises a first differential transistor pair (402) responsive to a first clock phase (P0) and a second differential transistor pair (412) is responsive to a second clock phase (P2) in combination with the rest of the limitations of the base claims and any intervening claims. Claims 14-17 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 4 wherein the interpolator further includes a differential amplifier (470) coupled to the differential output nodes (410, 411) of a first *plurality of differential transistor pairs* (402, 412) and a second

plurality of differential transistor pairs (432, 442) in combination with the rest of the limitations of the base claims and any intervening claims. Claims 19-28 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 7 wherein the integrated circuit further comprises a third differential transistor pair (706) coupled in parallel with the first differential transistor pair (702) between the first differential output node (710, 711) and the first current source (720) in combination with the rest of the limitations of the base claims and any intervening claims. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
